Important Information about your Performance Report

General Performance Report Disclosure

Account and investment values presented have been obtained by Shepherd Kaplan from other parties, such as custodians, mutual funds, fund managers and data providers generally considered reliable, but Shepherd Kaplan is not responsible for inaccuracies therein. Reported values and performance may differ from custodian-reported values due to differences in reporting methods and may change in a subsequent report based on the receipt of updated information. Private investment fund values (eg. hedge funds, private equity funds, private real estate partnerships) (i) reflect the most recent information received by Shepherd Kaplan, but may not be current, (ii) are subject to restatement throughout the year and (iii) do not necessarily reflect realizable values due to the illiquidity of private fund investments. Shepherd Kaplan provides both cumulative and annualized returns. Returns are cumulative unless indicated as annualized. An annualized return is the average return for each year over a given time period that is greater than one year. The results reported represent past performance and do not guarantee future results. Account and investment values may show gains or losses from time to time as markets and investments rise and fall. All investments involve risk, and achievement of a client's investment performance goals and preservation of principal cannot be guaranteed.

Portfolio Performance Report

The summary **Portfolio Performance Report** calculates aggregate portfolio gains or losses, cumulative and annualized Time-Weighted Return (TWR) and Internal Rate of Return (IRR), and includes realized and unrealized gains and losses, dividends and interest paid, and accrued interest for the periods reported. Returns are reported net of Shepherd Kaplan and other management fees if they are being paid from an investment account analyzed in this report. If such fees are paid from other sources, such as a corporate expense recapture account or another individual's account, then they are not deducted from reported returns unless otherwise indicated on the summary Portfolio Performance Report. If at a client's request other fees and expenses are also deducted from returns, they will be indicated, as well. Such fees and expenses would reduce reported returns if they were so deducted. The following is an example of the effect of compounded management fees over a period of time on the value of a client's portfolio: A portfolio with a beginning value of \$100, gaining an annual return of 10%, would grow to \$259 after 10 years, assuming no fees have been paid out. A portfolio with a beginning value of \$100 gaining an annual return of 10%, but paying fees of 1.5% per annum, would grow to \$223 after 10 years. The annualized returns over the 10 year period would be 10% gross of fees and 8.36% net of fees. If the fee in the foregoing example were .50% per annum, the portfolio would grow to \$247 after 10 years and return 9.45% net of fees. The fees were calculated on a monthly basis.

Performance By Asset Including Accrued Interest Report

The **Performance By Asset Including Accrued Interest Report** calculates for each position the cumulative percentage gain or loss on an IRR basis for stated periods, and the dollar gain or loss during the entire period in which the asset was held, in each case including accrued interest. For each asset class this report also calculates cumulative IRR and TWR for the stated periods. All dollar amount and percentage results reported for each position and asset class in this report are net of management fees other than Shepherd Kaplan fees, except that separately managed account results do not deduct management fees. The Cash and Equivalent asset class results reflect the deduction of management fees for separately managed accounts and Shepherd Kaplan fees for the total portfolio, and other fees and expenses if requested by the client, if such fees have been paid from an investment account analyzed in this report. The total portfolio IRR and TWR calculations appearing at the conclusion of this report are cumulative and reflect portfolio values net of Shepherd Kaplan and other management fees, and other fees and expenses if requested by the client, if so indicated on the summary Portfolio Performance Report.

Internal Rate of Return

An Internal Rate of Return (IRR), also known as a dollar-weighted return, represents actual performance including the timing effect of cash flows. This performance method takes into account not only the size of any cash flows, but also the length of time each flow affected the position or portfolio. An IRR gives greater weight to those time periods when more money was invested. An IRR is a single calculation, derived via the Discounted Cash Flow methodology, for a given time period. A dash may be shown in cases where an IRR cannot be calculated. Data may not be available for the period or an IRR cannot be calculated due to large changes in the relative magnitude of cash flows.

Time-weighted Return

A Time Weighted Return (TWR), also known as a dollar-constant return, represents manager skill, regardless of the value of the position or portfolio. TWR reflects the percentage gain or loss in an account or position during a stated period, equally weighting each day regardless of the value of assets invested. TWR ignores the effect of additional investments in or withdrawals from an account or position in order to measure the performance of the underlying investments. Shepherd Kaplan calculates daily returns, which are geometrically linked for the various time periods shown on the report. For example, a one year TWR is made up of 365 linked daily returns.
